

MindBricks

GROUP: LUCA BELTRAMI, LUCA DI BELLO, MARTA SAFAROVA

Our Goal

"MindBricks turns invisible environmental factors into actionable insight to boost your productivity"

We combine a **Pomodoro timer** with **device sensing** (light, noise, and phone usage) to **understand the conditions that help you focus best.**

- Data-driven personal study timeline
- City-building game
- Insightful visualizations

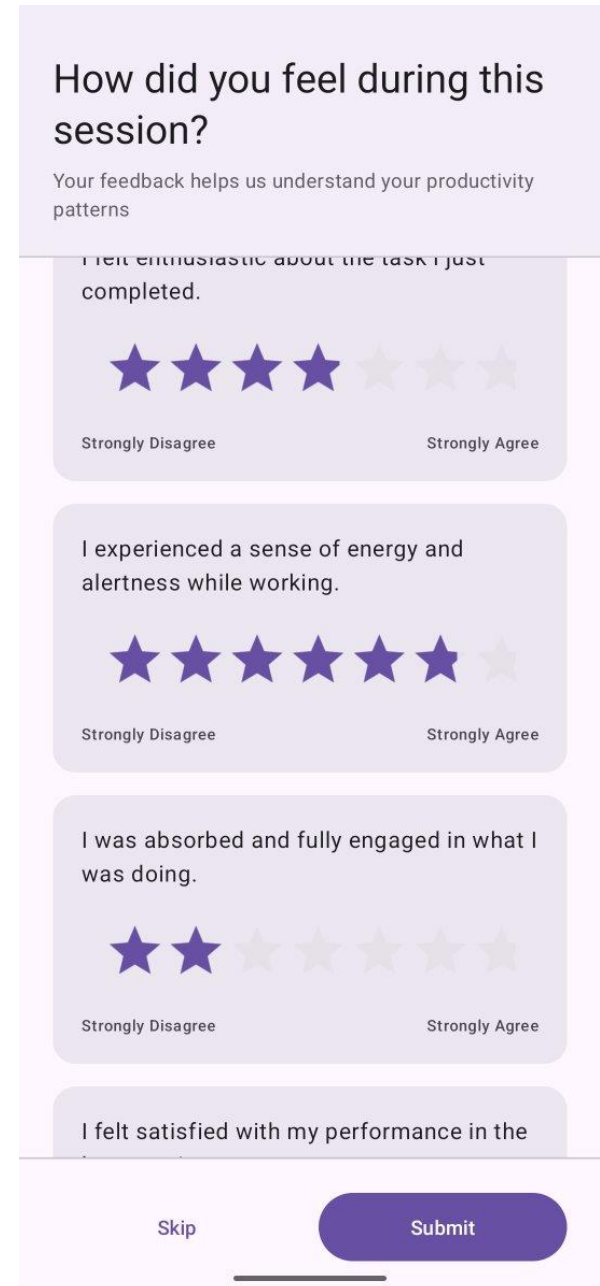

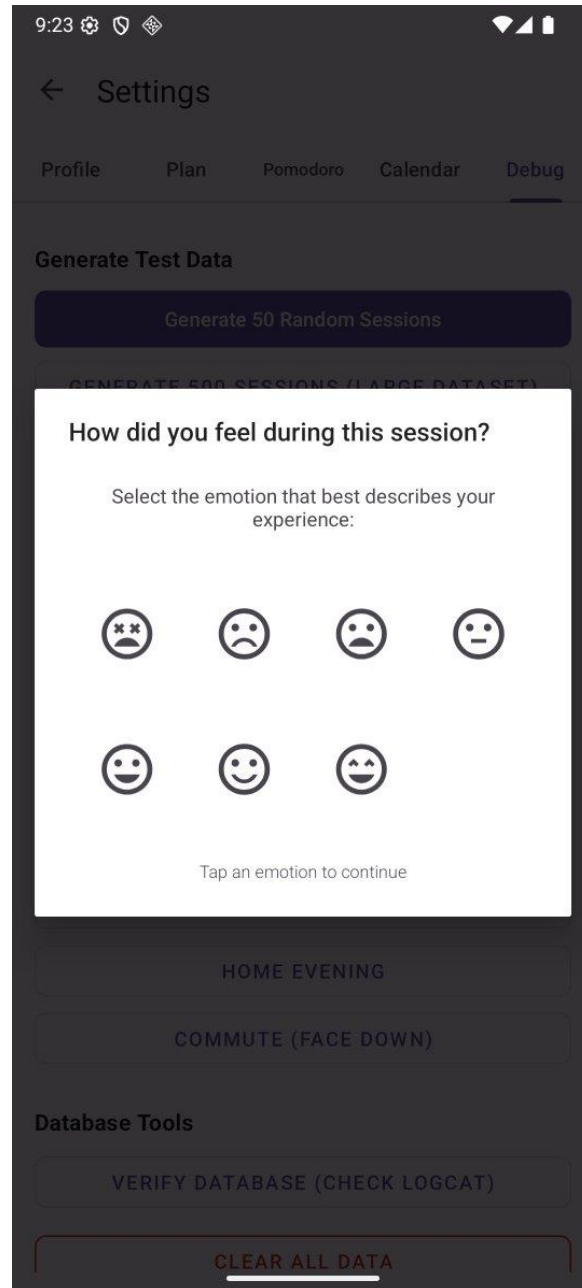

How does it work?

- Pomodoro timer app => (25m study + short breaks) x4 times + longer break
- Background sensor sampling (foreground service)
 - Noise (background)
 - Light level
 - Number of phone pick-ups
- Mood + Perceived productivity questionnaire = "focus score" (0-100)
- City building game: shop + big world
- Visualizations:
 - Generated Daily schedule
 - Average weekly focus
 - Study Streak Calendar
 - Focus score heatmap
 - Focus time distribution
 -

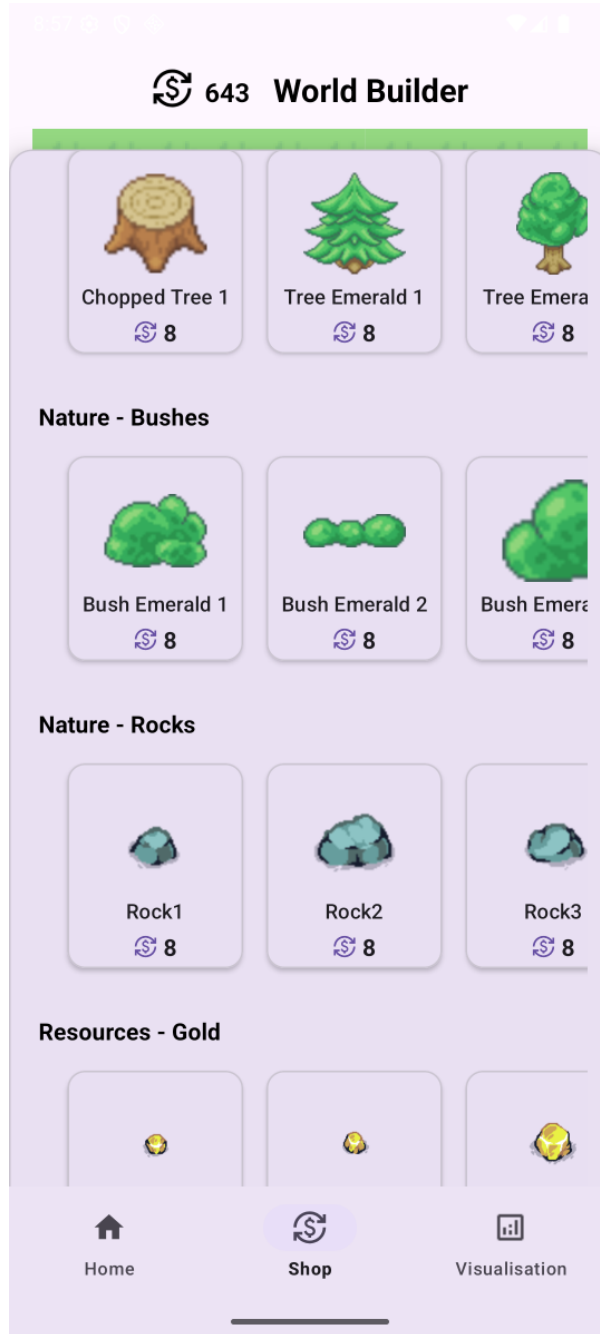

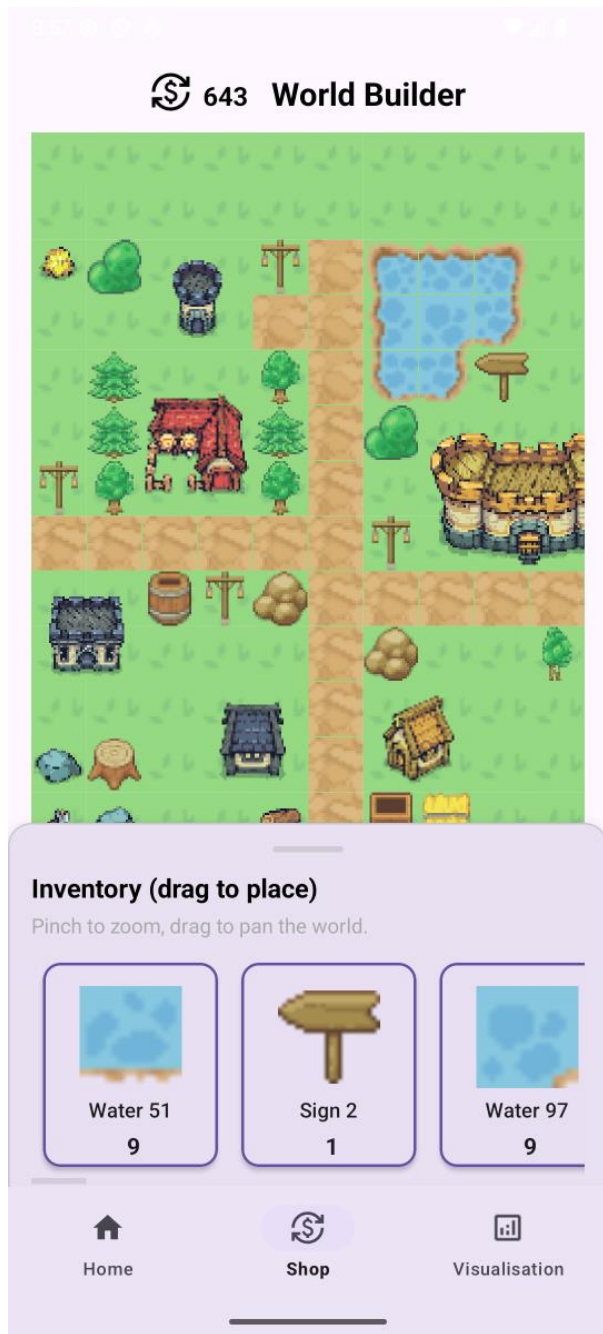

Questionnaires

After **EVERY** session...

- Engagement
- Alertness and Vitality
- Satisfaction
- Motivation
- Anticipation
 - "I want to study more!"

Live demo

Thanks!
